

Wellness Screening Tests

Our doctors believe preventive health screenings are essential to long term eye health and good vision. We now have diagnostic technology that allows us to screen for eye diseases such as Diabetes, Macular degeneration, Glaucoma, and corneal disease. These tests can detect a disease process at a very early stage. Early detection is the key to favorable treatments and outcomes. The following tests are not covered by your insurance, however, we strongly recommend you consider them at the time of your annual examination.

Please check which tests you wish to have performed.

Retinal scan and imaging

This test is strongly recommended if you or a family member have a history of *macular degeneration, diabetes, glaucoma, or hypertension*. Images are scanned and reviewed for these diseases, then stored for comparison at future exams. It has proven to be very accurate in diagnosing any of the above conditions. Fee for this test is **48.00**. The doctors will review all findings with you in detail.

I *elect* *decline* to have this test.

Anterior segment and topography

This screening is a more complete assessment of corneal health. If you wear contact lenses, had LASIK or you currently sleep in your contacts weeks at a time, this will give us a complete look at corneal health and long term effects of contact lens wear. This is a mandatory test for anyone considering Lasik. We also can evaluate *cataracts* more accurately. The fee for this test is **39.00**. Again, images will be reviewed at the time of your visit.

I *elect* *decline* to have this test.

You may choose Both retinal scanning and anterior segment screening for a discounted fee of 75.00 (12.00 savings)

Research has recently proven that nutritional supplements can have extremely positive benefits on eye health and the aging eye. Our doctors have specific products they now recommend for dry eyes, prevention of macular degeneration and cataracts. Please check below if you would like more information on nutritional supplements.
